

Ouma Ouru

Staff Software Engineer — Google Play

berjis.tech | bo.kouru@gmail.com | +254 725 227 513

PROFESSIONAL SUMMARY

Technical engineering leader with 11 years of hands-on software development experience and a broad background across mobile, backend, web architecture, infrastructure, and production reliability. Leads teams and technical initiatives while remaining hands-on with code and architecture. Experience includes large legacy migrations, production security and reliability, multi-product engineering leadership, and independent Kotlin/Android product development.

EXPERIENCE

Systems Administrator & Dev Team Manager · ProZ.com / TM-Town

2023 – Present

- Lead engineering and systems work across production platforms, combining software development, architecture, infrastructure, security, and operational reliability.
- Mitigated aggressive AI-crawler traffic affecting production using Cloudflare WAF rules and HAProxy rate-limiting, restoring stability without blocking legitimate users.
- Architecting a real-time interpreter call platform with P2P video and POTE (ProZ Online Translation Environment).
- Led PHP 5 → PHP 8 migration across a large legacy production codebase, resolving deprecations, type-safety issues, and PCI-compliance gaps.
- Drove front-end modernization from jQuery to Angular and designed a split reverse-proxy architecture for PHP, Angular, and Next.js workloads.
- Completed Ruby 2 / Rails 2 → Ruby 3 / Rails 6 upgrade for TM-Town, including dependency conflicts, deprecation cascades, and data migration.
- Rationalized a fragmented email infrastructure across multiple systems and consolidated delivery through SendGrid.

Development Team Manager · LTV Fund

2020 – Apr 2022

- Managed 25 developers across 10 simultaneous products, including Shopify applications, Quetext, Text2Give, Sentry for Amazon, and others.
- Joined as a Ruby developer and senior Customer Success representative, then progressed to team management within the year.
- Established code-review processes, sprint cadences, and deployment standards across a distributed engineering team.

Technical Support & Customer Success · Influx Agency

Aug 2019 – 2020

- Provided Tier 2 technical support and customer success for LTV Fund's Shopify application portfolio, bridging end users and engineering.

Freelance Developer / Founder · Berjis Tech & Others

2015 – 2019

- Founded and operated SomboGraphics, Bitways Tech, and Berjis Tech, delivering custom eCommerce builds, websites, and web applications.
- Berjis Tech remains active today at berjis.tech, continuing to take on client projects.

SELECTED ANDROID & ENGINEERING PROJECTS

GiftersClub — Android / Kotlin

Independent Android product built in Kotlin, combining mobile application engineering with backend/product architecture. Demonstrates hands-on Android development alongside production web and infrastructure leadership. Private source repository available on request.

TembeaPwani — Android / Kotlin

Independent Kotlin/Android product engineering project. Private source repository available on request.

Selected Kotlin / Android Portfolio

Additional independent Android applications include Shopify Partner Metrics, Group Goals, and Mum to Mum. All are private repositories and can be made available for technical review on request.

POTE — ProZ Online Translation Environment

Greenfield collaborative translation platform under active development; part of broader technical architecture and product development work.

Interpreter Call Platform

Real-time P2P video platform designed for professional language interpreters.

TECHNICAL SKILLS

Languages — Kotlin, Java, PHP 5–8, Ruby, JavaScript (ES6+), SQL, Bash

Mobile — Android application development, Kotlin; multiple independent Android products

Architecture — System design, distributed web systems, reverse-proxy architecture, application modernization, data migrations

Backend & Data — PostgreSQL, MySQL, PHP, Ruby on Rails, server-side systems

Infrastructure — Linux, Docker, Nginx, Apache, HAProxy, PM2, Cloudflare, production reliability

Leadership — Technical direction, engineering management, code review, mentoring, deployment standards, cross-product coordination

Frontend — Angular, Next.js, JavaScript/TypeScript ecosystem, jQuery
