

Ouma Ouru

Senior Systems Administrator & Lead Web Developer

berjis.tech | bo.kouru@gmail.com | +254 725 227 513

PROFESSIONAL SUMMARY

Versatile full-stack developer and systems administrator with 7+ years of professional experience spanning infrastructure engineering, team leadership, and end-to-end product development. Consistently called on to solve the unglamorous-but-critical problems: legacy migrations, compliance overhauls, attack mitigation, and platform consolidation. Comfortable going from a Cloudflare firewall rule to a Rails migration to a P2P video stream in the same sprint.

EXPERIENCE

Systems Administrator & Dev Team Manager · [ProZ.com / TM-Town](#) 2023 – Present

- Mitigated aggressive AI-crawler traffic taking down production using Cloudflare WAF rules and HAProxy rate-limiting, restoring site stability without blocking legitimate users.
- Migrated Next.js application off Docker onto bare-metal with PM2, eliminating container overhead and improving deployment reliability.
- Architecting a real-time interpreter call platform with P2P video, and POTE (ProZ Online Translation Environment).
- Led PHP 5 → PHP 8 migration across a large legacy codebase, resolving deprecations, type-safety issues, and PCI-compliance gaps.
- Drove front-end modernisation from jQuery to Angular; designed a split reverse-proxy setup with Apache serving PHP 8 and Nginx routing Angular and Next.js workloads.
- Rationalised a sprawling email infrastructure spread across SendGrid, Swiftmailer, ZendMail, mail(), and legacy ES2 integrations — consolidated to SendGrid exclusively, restoring reliable delivery.
- Completed Ruby 2 / Rails 2 → Ruby 3 / Rails 6 upgrade for TM-Town, handling dependency conflicts, deprecation cascades, and data migration.

Development Team Manager · [LTV Fund](#) 2020 – Apr 2022

- Managed 25 developers across 10 simultaneous products: InCart Upsell, Product Customizer, Website on Demand (Shopify apps), Quetext, Text2Give, Sentry for Amazon, and others.
- Joined as a Ruby developer and senior Customer Success representative handling Shopify app support; promoted to team manager within the year.
- Established code-review processes, sprint cadences, and deployment standards across a distributed engineering team.

Technical Support & Customer Success · [Influx Agency](#) Aug 2019 – 2020

- Provided Tier 2 technical support and customer success for LTV Fund's Shopify app portfolio, acting as the bridge between end-users and the engineering team.

Freelance Developer / Founder · [Berjis Tech & Others](#) 2015 – 2019

- Founded and operated SomboGraphics, Bitways Tech, and Berjis Tech — delivering custom eCommerce builds (OpenCart), websites, and web applications for various clients.
- Berjis Tech remains active today at [berjis.tech](#), continuing to take on client projects.

TECHNICAL SKILLS

Languages	PHP 5–8, Ruby, JavaScript (ES6+), HTML5, CSS3, SQL, Bash
Frameworks	Angular, Next.js, Ruby on Rails 6, jQuery
Databases	PostgreSQL, MySQL
Web Servers	Nginx, Apache, HAProxy
Infrastructure	Docker, Linux (Ubuntu / Debian), PM2, Cloudflare, Git, Phusion Passenger, Capistrano
Email	SendGrid
Platforms	Shopify (app development), OpenCart

NOTABLE PROJECTS & INITIATIVES

- POTE — ProZ Online Translation Environment: greenfield collaborative translation platform, actively in development.
 - Interpreter Call Platform: real-time P2P video call system built for professional language interpreters.
 - PHP 5 → 8 at ProZ.com: large-scale migration of a production codebase serving a global translator community.
 - Ruby 2/Rails 2 → Ruby 3/Rails 6 at TM-Town: full upgrade of a live translation memory marketplace.
 - LTV Fund portfolio management: overseeing simultaneous development on 10 products with a 25-person team.
